Mini-World: Smart Home Installation Service

Entities & Attributes:

- Customer: CustomerID (PK), Name, Email, HomeAddress, PhoneNumber
- Technician: TechID (PK), Name, CertificationLevel, HourlyRate
- SmartHDevice: DeviceID (PK), Brand, ModelName, Price
- InstallationOrder: OrderID (PK), Date, Status

Relationships:

A Customer can place multiple InstallationOrders. Each InstallationOrder is assigned to one Technician. An InstallationOrder can include many SmartHDevices.

I just thought of the basic things that would be managed in a smart home service which would be the devices, customers, their orders, and the technicians that will handle the installation.
